

Fishing in the Seychelles

Story by: Mikael Barbe, Ryan Benstrong, James Ernesta, Mario Dubel

According to fishermen in the Seychelles these days they have to fish deeper because sea surface temperatures are rising and fish are going deeper. They also need to go out fishing for longer periods of time and further out than usual. Because of a warmer sea temperature, they also report that the fish they are catching are changing shape.

In addition, they have to spend more money on food supply, fuel and fishing materials. We need to be aware about our ecosystem and how climate change will impact on it. The above impacts mean fish are more expensive on the local market. Fishermen's livelihood is getting harder and our economy suffers.

By the turn of this century many of the world's islands and coast lines will change or disappear altogether, placing at risk millions of people whose lives depends upon the coast.
